

INTERACTION AND VERSATILITY AT THE SERVICE OF SMART CITIES. This functional and attractive totem covers multiple uses, from lighting, as an efficient and modern LED street light with static panels or QR identifiers, to citizen information, providing services in an unattended open space.

Interaction with the eUrban can be through various interfaces used individually or in combination. Many devices can be integrated: touch screens, readers, buttons or keyboards, cameras or a simple intercom connected by GSM to the police or emergency services. This chameleon-like totem, which can be self-powered by a solar panel, can also be used as a bus stop, WIFI point, parking meter, bicycle rental management terminal...

Its steel structure, coated with epoxy paint, can house several screens of different sizes: up to 17" horizontally and up to 19" vertically.
