

FRONT OPENING. The e400 has a front door which allows the integration of peripherals at different heights, adapting to the legislation of each autonomous community. It also allows its use by people with reduced mobility.

Different peripherals can be added, from readers, keyboard module, POS module, even 2 wheels for easy handling. Rear loading printer and front unblocking.

This interactive kiosk, in addition to all the customisation options, can be personalised in plan, printing directly on the front. In addition, the low front panel can be panelled in different types of wood, which makes it blend in with the environment, thus reducing the visual impact. It is perfect for hotel lobbies, museums or religious temples.
