Robust 22" multifunctional kiosk with front and rear doors

Indoor Kiosk

MAXIMUM IMPACT in a compact space without compromising ergonomics or integration capacity.

The ergonomic interaction kiosk features a customisable structure that allows for the integration of a wide range of industrial components and a 22" vertical LCD/LED screen. Its modular design easily adapts to various environments and requirements without losing visibility or functionality.

This terminal is ideal for ticketing or self-service applications. It supports the integration of industrial components such as ticket printers, card payment systems, and various types of readers or dispensers. Key enhancements include front-loading paper capability with jumbo roll support, a customisable front panel (flat, bevelled, or curved), and optional LED backlighting for the screen. Additionally, its base can be fixed or mobile, offering greater flexibility in installation.
